

# Retrofit Components

Our Sanitary Waste Disposal Unit offers a range of retrofit options that can be added to our large, regular and small units. These options will help you to tailor a system that is perfect for your customer or household requirements.

## Disposable Cartridges

Our Disposable Cartridges consist of both a lid and an inner lining, as they are bonded together during the manufacturing process. They also utilise a revolutionary ‘additive’ technology, which renders the resulting plastic components as biodegradable. When the Cartridge is full or ready to be changed, you dispose of both the lid and the inner liner. This makes the process of cleaning and maintenance a lot faster and safer for the service provider.

### Cartridge capacity

Our Large Cartridge has a 26 litre capacity, our Regular a 13 litre capacity and our Small a 6.5 litre capacity.

### Colour options

Our Cartridges have been designed in two colours, black and white, allowing you to match the sanitary unit with the style of your washroom decor.

## Base

Our retrofittable outer Bases come in three sizes; Large (26 litres), Regular (13 litres) and Small (6.5 litres). The Bases are made using ABS plastics so are strong, durable, and recyclable. They are freighted in halves enabling us to reduce our carbon footprint, by reducing our freight volume.

### Using sleek design principles

The sanitary unit has been designed to fit into the smallest of spaces. It has also been designed to offer a contemporary look, that integrates perfectly into the modern bathroom and commercial washroom.

### Easy to assemble

The Bases are made in halves and clip together for installation. They can be either wall mounted or free-standing to suit your installation.

### Colour options

The Bases come in black and white, to suit your washroom decor.

## Foot-pedal

The TerraCyclic sanitary disposal unit offers the customer three options to dispose of their sanitary waste;

1. a manual opening option,
2. a hands-free, Foot-pedal option,
3. a hands-free Auto Sensor option.

### Colour options

These Foot-pedals come in two colour options, black and white. They fit all of our 26, 13 and 6.5 litre Bases, so the Foot-pedal can be used to help achieve the solution that your customers are looking for. These Foot-pedals are supplied with a Base Plinth to form a 'free-standing' sanitary solution.

## Auto Sensor

Our sanitary unit Auto Sensors have been designed to totally eliminate the need for skin contact. The Sensor is connected to the Cartridge Lid by the way of an Actuator Arm, that opens the Lid when you place your hand over the Sensor. The battery option provides a minimum of 12 months of operation. The Auto Sensor offers a state-of-the-art sanitary solution that works for even the most discerning of customers.

### Colour options

Our Auto Sensors have been designed in two colours, black and white, allowing you to match the sanitary units Sensor with the colour option that suits your washroom decor.

## Wall-mount option

Depending on the space available, you may choose to Wall-mount the sanitary unit to any wall, or door if necessary. Our systems have been designed to give you total flexibility. Wall-mounting is a fast and efficient process which enables the Unit to be safely off the floor and to become unobtrusive in even the smallest of washroom cubicles.

### Colour options

Our Wall-mounts have been designed in two colours, black and white, allowing you to match the sanitary units mounting system with the colour option that suits your washroom decor.

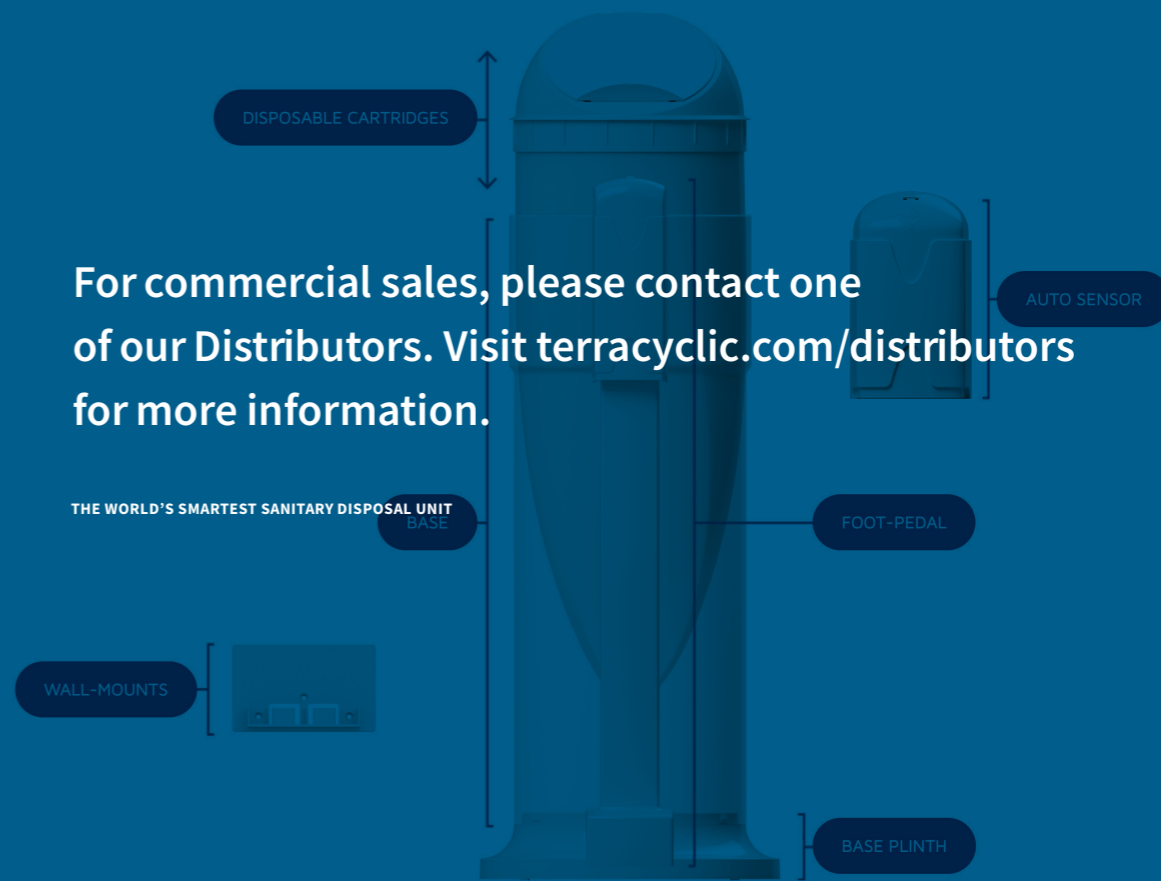

## Base Plinth

Our Base Plinths click into the bottom of our Small, Regular and Large Bases. Allowing the unit you choose to become a free-standing sanitary waste disposal unit. Light weight and yet designed to be well balanced and stylish. Giving you the option to provide a totally free-standing unit. The choice is entirely yours.

### Colour options

Our Base Plinths have been designed in two colours, black and white, allowing you to match the sanitary disposal unit with your washroom decor.
